INTRODUCTION TO REQUIZA

Requiza is the first cryptocurrency to address all human needs by decentralized crowdfunding using blockchain technology. It is a Decentralized Finance (DeFi) protocol launched on the binance ecosystem.

REQUIZA brings ease to real estate, transportation, food supply, education, industries, E-commerce, pension administration, crypto to fiat exchange globally, and the deployment of POS machines with customized debit cards through tokenizing crowdfunding with smart contracts on Blockchain Technology.

REQUIZA allows token holders to access developmental projects, create jobs in different countries, and secure their financial future through innovative crowdfunding on Blockchain.

VISION

REQUIZA VISION: To Bridge the gap between Digital Economy in the Cryptocurrency ecosystem with real sector economies (Industries and Businesses) using Blockchain Technology.

Driven by the incredible global team of Blockchain and Financial experts, REQUIZA is poised to leverage the revolutionary growth in the Cryptocurrency space to provide basic human needs and Backup Digital Assets with Real Sector Assets.

The Crowd-Fund eligibility criterion for any Project listed on the REQUIZA SMART CONTRACT LAUNCHPAD requires the Crowd-Funder to purchase the specific PROJECT TOKEN using RXA TOKENS, creating utility for requiza tokens. Individuals, Corporate Organizations, and nations with existing businesses or Innovative Ideas can list their PROJECTS on the REQUIZA SMART CONTRACT LAUNCHPAD.

LIMITATIONS OF CURRENT CROWD FUNDING SYSTEM

High fees: Crowd-funding platforms take a fee for every project listed. Sometimes, this is a flat fee, while others require a percentage of contributors' proceeds, cutting into the availability of funds and straining the fundraising process when startups are looking for every single dollar to aid them.

Marketing and Advertising: With few exceptions, platforms will not help spread the word about new startups, which means startups need to pay for marketing and advertising, which is yet another strain on limited funds available for them, thus taking their focus from innovation and creativity.

Fine print rules and regulations: Not all platforms accept services as a possible project and demand actual tangible products; this mindset cripples innovation and narrows the horizon of new products and services.

Scam Startups: In some cases, startups turn up as scams and produce nothing, leaving investors with no Return On Investment (ROI).

Intellectual Property Risk: In some cases, startups have no protection of their intellectual property, exposing them to experienced investors who can take the idea into the market early with all their resources.

SOLUTIONS

Blockchain: Startups will not rely on any platform or combination of platforms to enable creators to raise funds. Startups will no longer deal with the rules, regulations, and whims of the most popular crowdfunding platforms on the internet. It gives Projects a chance of getting visibility and being funded and eliminates the problem of fees. While Blockchain upkeep does cost money, it drastically cuts down transaction fees, making crowdfunding less expensive for creators and investors.

Tokenization: Instead of using crowdfunding to enable preorders of upcoming tangible products, requiza smart contract launchpad would rely on asset tokenization to provide investors with equity, providing an open new world of investment opportunities. Startups could save money on hiring employees by compensating them partially in fractional ownership of the business, converting it into an employee-owned enterprise. In this model, asset tokens become their form of currency, enabling organizations to hire professionals, marketers, and advertisers.

High availability and immediate provision: Any project using a Blockchain-based crowdfunding model will get funding. Also, any person with an internet connection can contribute to those Projects. Blockchain-based Crowd-funders would not have to worry about the fraud that has plagued modern-day crowdfunding projects. Instead, contributors will immediately receive fractional enterprise or product ownership.

Smart Contracts to Enforce Funding Terms: There are several ways in which Blockchain-enabled Smart Contracts could provide greater accountability in crowdfunding. Primarily, these contracts would provide built-in milestones that would prevent funds from being released without provenance as to a project or campaign legitimacy. This would prevent large sums of money from being squandered by those who are either ill-intended or not qualified to be running a crowdfunding campaign in the first place.
